

Recover Lost Revenue

Warranty Labor Rate Increase (WLRI) & Warranty Parts Markup Increase (WPMI) Submissions with Dynatron

In the past few years, few opportunities have presented themselves to US dealers where they can increase revenue without significant investments in marketing, people, inventory, or facilities. But due to recent laws in almost all 50 states, dealers now have a new avenue to recover lost revenue when dealing with warranty labor and parts reimbursement. **A typical warranty part reimbursement markup through an OEM is around 40%—actual markup can be up to double that.**

THE CHALLENGES:

Most dealers are not compliance experts and with ever changing filing requirements, keeping up to date with the most recent rules and regulations is time consuming. In addition, the filings themselves are complex endeavors that take massive amounts of time; therefore dealers often lack the internal resources (time and people) to take full advantage of the opportunity.

Many dealers have underlying Effective Labor Rate inefficiencies that create little or no initial filing opportunities. That is why Dynatron works with each dealer to fix any underlying issues prior to filing—to unlock and maximize your revenue potential.

Dynatron Software is the premier provider of automotive fixed operation data analytics, business intelligence, and pricing optimization. Our solutions provide quantifiable and substantial ROI with the least amount of managerial effort.
